The skills can be pumped up to level 11. These characters can have 15 stars = 5 star rainbow. ELITE - At the beginning it is worth
 downloading heroes of © Lite, but if possible to replace them with epic heroes. The maximum pumping level is 160. The skills can be pumped up to 4 levels. Ordinary - They don't have many stars, so it's better to spray them immediately, it's not worth pumping them. The characters abandon in random order, so there is little opportunity to
intentionally collect heroes. Therefore, it is recommended to download those epic heroes that more often fall. It makes no sense to rest against any character. If possible, for example, pump kilos, you should pump it (especially because it is a strong tank). Do not wait for another sample to fall or appear in the shop. But pumping many heroes at the
same time makes no sense. It is necessary to determine the five main characters and should only invest in them. In the subsequent stages of the game, you have to pump only epic heroes (after about 2-3 weeks from the beginning). It is necessary to collect them by type, since there is an excellent increase in the characteristics due to resonance. The
heroes are divided into classes: the tank is a melee fighter, has increased health and protection. In battle, all the damage caused are subjected. His main task is to prevent other characters from dying. Often tanks can control the actions of the opponents, reduce their effectiveness in the battle. The magician is a remote fighter, does enormous damage
to the opponents, can inflict damage on the area. He often has the ability to immobilize opponents, reduce their effectiveness in battle. The main task of magicians is to inflict damage to enemies. He has low levels of protection and health. To pump and dress it is necessary to attack. SUPPORT - A distance fighter, has no pronounced features. The main
task of him in the battle is id id Aticapac al ah, aihcsim ni oreirreug nu "A etnettabmoc nU .enoizetorp orol al o itaella ilged enoigiraug into a crowd of enemies and inflict tangible damage on them. As a rule, it has good health and attack. Its main task is to prevent enemies from breaking through to fragile characters. Has a high dodge rate. The
shooter is a ranged fighter, has the ability to control enemies, has powerful attacks on 1 (sometimes more) targets. It has low health and protection indicators, while it has improved accuracy of shots. Heroes also have a specialization that determines their behavior in battle: Recovery - restores health points to yourself and allies. Damage - Deals
damage to enemies. Jerk - the hero¢ÂÂÂs ability to quickly move to distant rivals and inflict quick damage on them. Healing is the massive healing of allies. Control) - enchants rivals and inflict quick damage on them to effectively fight. Mass damage - hits all enemies or attacks on a specific area. Explosive Damage - Releases a sphere that explodes
after a certain period of time. Class and specialization should be the main parameters when choosing a hero in the squad. Character upgrade Characters are assembled from fragments of the Hero. Different number of fragments, which depends on the quality of the champion. Performance enhancement occurs in three ways:
Equipment. Level Up. Star Rating. Equipment. In addition to improving the characteristics of one thing, a combination of objects also gives a bonus to the parameters of the hero. For example, if you collect all the rare (blue) items of equipment, then it will give a good increase in performance. But if there is a part of green (unusual) things, then the
bonus will be calculated on unusual items of the hero¢ÃÂÂs wardrobe. This is worth considering. Equipment can increase stardom, thereby improving the character himself. In order to improve equipment, you need to go into the hero¢ÃÂÂs window, select the necessary item. After that, the window of
the selected item will open. The basements are restored at 00:00 hours of the server every day. Here, for each
step of levels, the degree of medals is given. With each new rank, the new basements are unlocked. The new basements give the player more prizes with the most high quality compared to the previous underground. Each underground has 3 levels in which there are closed gates. To open the gate and go to the next level, you have to find the key.
Together with the opening of the doors, a case with gifts opens (located on each level). When all the levels are completed, the player will be able to get out of the basement and receive rewards. To re-pass the basement, you will have to use special tools. If the player could not pass the basements before restoring, then he still received a gift. During
the restore, the player receives an evaluation, which depends on the number of completed levels and defeated enemies. The evaluation is necessary to increase the experience (progress), which in turn affects the reception of the degree of medals. To move on to the next dungeon, it is necessary to complete the levels with a minimum level of 1 s. The
highest is the degree of passage, the better the prizes available at the time of the passage are shown on the right side of the exception of the boss, which is waiting for the players at level 3 of each underground. There are also
various elements that strengthen the team. But passing 1 dungeons, it is recommended to put the heroes in the team able to restore health for themselves and the team. A better to take a rower, which, due to
the self-media, can be to resist enemies for a time and cover his powerful back with fragile allies. An A level is made up of several cells to be delivered. Each cell is filled with uncertainty: it can be an enemy, a trap or a pleasant surprise. If the player opens the enemy, the cells adjacent to him will be inaccessible to open until the player kills the
enemy. In the maze, as in every battle, there is resonance and reaction. This should be taken into account when taking heroes into the dungeons. In battle, you can set the samples use their skills alone. For a successful battle, you can get coins for equipment
Although the player has found the key behind the first open cell (battle), it is recommended to open all cells at the end. Ciò à is needed to get as many bonuses. If there's vampirism! After defeating the enemy, a drop appears on his cell, clicking on which à is possible to select 1 of 3 bonuses. If there's vampirism in bonuses, you just have to
take it. Vampirism is released to all members of the team, at their own expense they will be treated for any harm, so they can reach the end of the prison. If vampirism is not on the cards, then it is better to heal. Sometimes bonuses are given as heroes. In this case, you should take the improvement suitable for most team heroes. If a healer appears in
 these bonuses, then it is recommended to treat the weaker hero¹ (if his type of card falls). Underground elements in the maze, at each level, the player will meet various positive and negative elements: freezing spell: A is better to use it after opening several opponents at one level. accelerate development processes. Can you like any player from the tables. It gives nothing, only a person will be satisfied. Conclusion we liked the game. Compared to other similar games, there are some positive points: the heroes are well expressed and traced. All activities can be completed in one hour. There is no need to sit for half a day, as in
other games, in order to get something in the game. A lot of diamonds can be obtained from different places. The developers generously addressed this problem. The game is thought out, it's nice to play. Of course, as in other games of this kind, there are very few heroes â € "rivals, only they become heavier. But this point does not obscure the
gameplay. Authors of the article: Evgenia G., Yaroslav I. I.
